

## Microbiome Sample for: tnt.polaris@gmail.com - Self

Lab: BiomeSight

Sample Date: 7/31/2023 12:00:00 AM

### For non-prescribing Medical professionals Review

These suggestions are based on an Expert System (Artificial Intelligence) modelled after the MYCIN Expert System produced at Stanford University School of Medicine in 1972. The system uses 1,875,480 facts with backward chaining to sources of information. The typical sources are studies published on the US National Library of Medicine.

These are suggestions that are predicted to independently reduce microbiome dysfunction. Suggestions should *only* be done after a review by a medical professional factoring in patient's conditions, allergies and other issues.

**This report may be freely shared by a patient to their medical professionals**

## Substance to Consider Adding or Taking

These are the most significant substances that are likely to improve the microbiome dysfunction. Dosages are based on the dosages used in clinical studies. For more information see: <https://microbiomeprescription.com/library/dosages>. These are provided as examples only

Colors indicates the type of substance: i.e. probiotics and prebiotics, herbs and spices, etc. There is no further meaning to them.

The recommended process to obtain a persistent shift of the microbiome is:

Generate 4 lists from the suggestions with nothing repeated on another list

Emphasize one list each week

After 8 weeks (2 cycles), retest the microbiome to obtain the next set of course corrections

This approach allows the microbiome to stabilize towards normal.

Pick only as many suggestions that suits you; there is no need to do all of them. Suggestions are based on your specific bacteria and not marketing concepts such as 'healthy choices'.

(+)-catechin

barley 60 gram/day

bifidobacterium bifidum (probiotics) 1 BCFU/day

chicory (prebiotic) 1800 mg/day

cholic acid (bile acid)

choline 1g/day

chrysanthemum morifolium

clostridium butyricum (probiotics), Miya, Miyarisan 1 gram/day

Curcumin 3 gram/day

epicatechin

inula viscosa, false yellowhead

inulin (prebiotic) 32 gram/day

ku ding cha tea

lactobacillus brevis (probiotics) 10 BCFU/day

Lactobacillus Johnsonii (probiotic) 10 BCFU/day

mastic gum (prebiotic) 1000 mg/day

olea europaea, olive leaf 700 mg/day

rare meat

refined wheat breads

resistant starch

saccharomyces cerevisiae (probiotics)

Slippery Elm

sugar

triphalia 9000 mg/day

whole-grain wheat

xylitol

## Retail Probiotics

Over 260 retail probiotics were evaluated with the following deemed beneficial with no known adverse risks.

V-BIOTEX / PURE L CRISPATUS PROBIOTIC

Pendulum / *akkermansia muciniphila*

SuperSmart / Akkermansia Muciniphila Postbiotic (pasturized)

Metabolics / *Lactobacillus Helveticus* Powder

Note: Some of these are only available regionally – search the web for sources.

## Substance to Consider Reducing or Eliminating

These are the most significant substances have been identified as probably contributing to the microbiome dysfunction.

In some cases blood work may show low levels of some vitamins, etc. listed below. This may be due to greedy bacteria reported at a high level above. Viewing bacteria data on the Kyoto Encyclopedia of Genes and Genomes (<https://www.kegg.jp/>) may provide better insight on the course of action to take.

Baking Soda, Sodium Bicarbonate

hydrogenated palm oil

Cacao

*lactobacillus gasseri* (probiotics)

camelina seed

*lactobacillus sakei* (probiotics)

carbohydrates

linseed(flaxseed)

cellulose (prebiotic)

marijuana

Cranberry

navy bean

ginko

Pumpkin

heme

sodium stearoyl lactylate

## Sample of Literature Used
